## **DETAILED ACTION**

### ***Information Disclosure Statement***

The IDS filed 9/20/2000 was considered in the parent case.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Gordon et al. (US 5,987,316).

Regarding claim 1, Gordon teaches a wireless communication system (fig. 1), comprising: a position location system 15 (col. 1, lines 57-64, col. 4, lines 35-38) for determining the position of a mobile station 3; and a central call processor 11 coupled to the position location system 15 for determining whether the terminal 3 has moved more than a predetermined distance from a predetermined initial location and for preventing communications with the terminal 3 if the terminal 3 has so moved (col. 2, lines 1-3, col. 3, line 43).

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Tsuzuki et al. (US 5,502,758).

Regarding claim 1, Tsuzuki teaches a wireless communication system (fig. 1), comprising: a position location system 2 (col. 6, lines 3-12) for determining the position of a mobile station 21; and a central call processor 20 coupled to the position location system 2 for determining whether the terminal 21 has moved more than a predetermined distance from a predetermined initial location and for preventing communications

with the terminal 21 if the terminal 21 has so moved (col. 7, line 66 through col. 8, line 12).
